

Processing Boot Camp

Control Structures

Creative Coding & Generative Art in Processing 2

Ira Greenberg, Dianna Xu, Deepak Kumar

Key Computing Ideas

- The computer follows a program's instructions. There are four modes:
 - **Sequencing**
All statements are executed in sequence
 - **Function Application**
Control transfers to the function when invoked
Control returns to the statement following upon return
 - **Repetition**
Enables repetitive execution of statement blocks
 - **Selection**
Enables choice among a block of statements
- All computer algorithms/programs utilize these modes.

Sequencing

- Refers to sequential execution of a program's statements

```
do this;  
then do this;  
and then do this;  
etc.
```

```
size(200,200);  
background(255);  
  
stroke(128);  
rect(20, 20, 40, 40);
```

Function Application

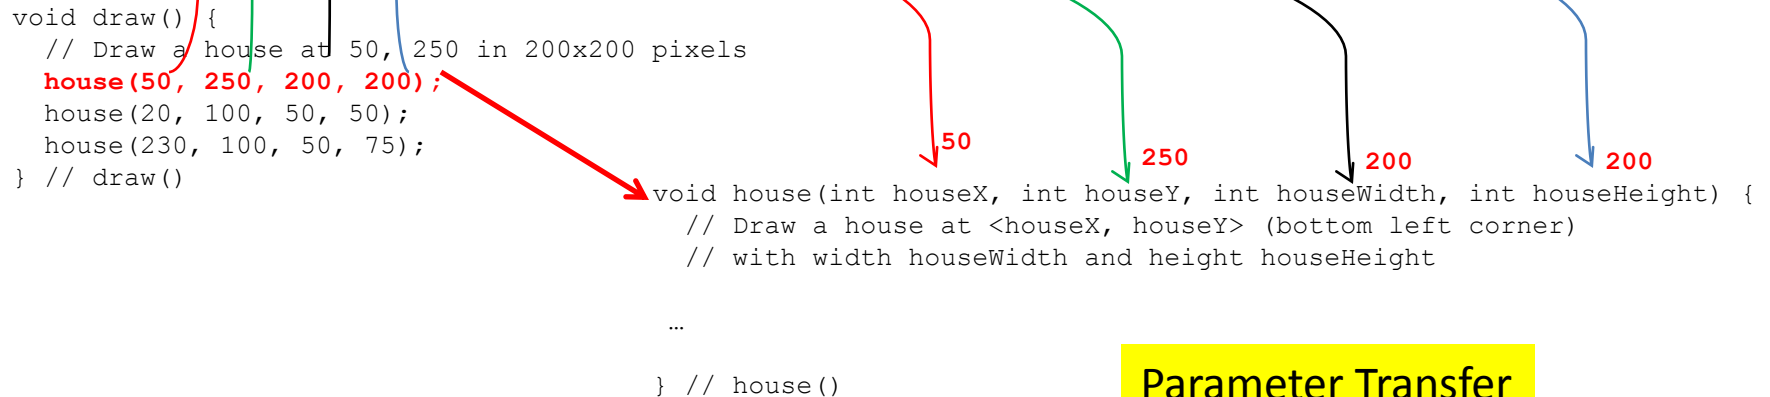

- Control transfers to the function when invoked
- Control returns to the statement following upon return

```
void draw() {  
    // Draw a house at 50, 250 in 200x200 pixels  
    house(50, 250, 200, 200);  
    house(20, 100, 50, 50);  
    house(230, 100, 50, 75);  
} // draw()  
  
void house(int houseX, int houseY, int houseWidth, int houseHeight) {  
    // Draw a house at <houseX, houseY> (bottom left corner)  
    // with width houseWidth and height houseHeight  
    ...  
} // house()
```

The diagram illustrates the control flow between two functions. A red arrow points from the call to `house(50, 250, 200, 200);` inside the `draw()` function to the start of the `house()` function definition. Another red arrow points from the end of the `house()` function definition back to the line immediately following the call to `house(50, 250, 200, 200);` in the `draw()` function, showing the return path.

Function Application

- Control transfers to the function when invoked
- Control returns to the statement following upon return

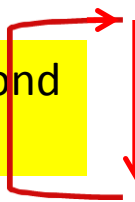

Repetition

- Enables repetitive execution of statement blocks

lather
rinse
repeat

Repeat frameRate times/second
Default frameRate = 60

```
void draw() {  
    do this;  
    then this;  
    and then this;  
    etc.  
} // draw()
```

Loops: Controlled Repetition

- **While Loop**

```
while (<condition>) {  
    stuff to repeat  
}
```

- **Do-While Loop**

```
do {  
    stuff to repeat  
} while (<condition>)
```

- **For Loop**

```
for (<init>; <condition>; <update>) {  
    stuff to repeat  
}
```

Loops: Controlled Repetition

- **While Loop**

```
while (<condition>) {  
    stuff to repeat  
}
```

- **Do-While Loop**

```
do {  
    stuff to repeat  
} while (<condition>)
```

- **For Loop**

```
for (<init>; <condition>; <update>) {  
    stuff to repeat  
}
```

All of these repeat
the stuff in the block

The block
{...}
is called the Loop's Body

While Loops

```
while ( <condition> ) {  
  stuff to repeat  
}
```

```
void setup() {  
  size(500, 500);  
  smooth();  
  background(164, 250, 238);  
} // setup()  
  
void draw() {  
  
  fill(232, 63, 134, 127);  
  stroke(0);  
  
  int i = 0;  
  while (i < width) {  
    ellipse(i, height/2, 50, 50);  
    i = i + 55;  
  }  
} // draw()
```

Conditions

- Conditions are **boolean** expressions.
 - Their value is either **true** or **false**
- e.g.

POTUS is a woman

5 is greater than 3

5 is less than 3

Conditions

- Conditions are **boolean** expressions.
- Their value is either **true** or **false**

e.g.

POTUS is a woman **false**

5 is greater than 3 **true**

5 is less than 3 **false**

Writing Conditions in Processing

- Boolean expressions can be written using boolean operators.

Here are some simple expressions...

<	less than	$5 < 3$
<=	less than/equal to	$x \leq y$
==	equal to	$x == (y+j)$
!=	not equal to	$x \neq y$
>	greater than	$x > y$
>=	greater than/equal to	$x \geq y$

Logical Operations

- Combine two or more simple boolean expressions using logical operators:

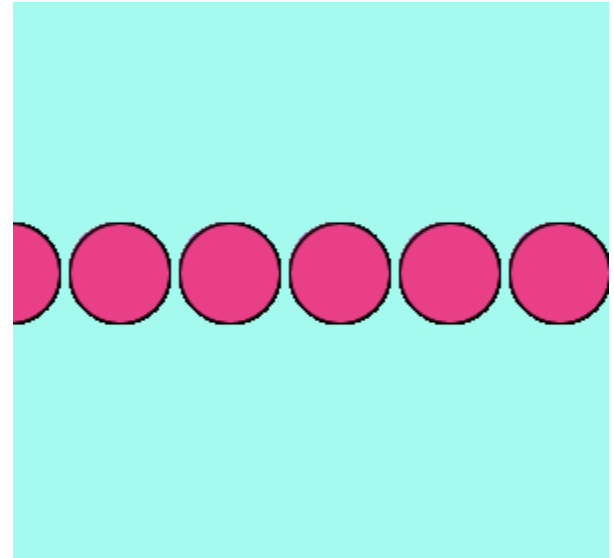

&&	and	$(x < y) \ \&\& \ (y < z)$
	or	$(x < y) \ \ (x < z)$
!	not	$!(x < y)$

A	B	A && B	A B	!A
false	false	false	false	true
false	true	false	true	true
true	false	false	true	false
true	true	true	true	false

Conditions in While Loops

```
while ( <condition> ) {  
    stuff to repeat  
}
```

```
int i = 0;  
while (i < width) {  
    ellipse(i, height/2, 50, 50);  
    i = i + 55;  
}
```

10,000 circles!

```
while ( <condition> ) {  
  stuff to repeat  
}
```

```
void setup() {  
  size(300, 300);  
  smooth();  
  background(164, 250, 238);  
} // setup()  
  
void draw() {  
  
  fill(232, 63, 134, 127);  
  stroke(0);  
  
  int i = 0;  
  while (i < 10000) {  
    ellipse(random(width),  
            random(height),  
            25, 25);  
    i = i + 1;  
  }  
} // draw()
```

Loops: Controlled Repetition

- **While Loop**

```
while (<condition>) {  
    stuff to repeat  
}
```

- **Do-While Loop**

```
do {  
    stuff to repeat  
} while (<condition>)
```

- **For Loop**

```
for (<init>; <condition>; <update>) {  
    stuff to repeat  
}
```

Do-While Loops

```
do {  
  stuff to repeat  
} while ( <condition> );
```

```
void setup() {  
  size(300, 300);  
  smooth();  
  background(164, 250, 238);  
} // setup()  
  
void draw() {  
  
  fill(232, 63, 134, 127);  
  stroke(0);  
  
  int i = 0;  
  do {  
    ellipse(random(width),  
            random(height),  
            25, 25);  
  
    i = i + 1;  
  } while (i < 10000);  
} // draw()
```

For Loops

```
for (<init>; <condition>; <update>) {  
  stuff to repeat  
}
```

```
void setup() {  
  size(300, 300);  
  smooth();  
  background(164, 250, 238);  
} // setup()  
  
void draw() {  
  
  fill(232, 63, 134, 127);  
  stroke(0);  
  
  for (int i = 0; i < 10000; i++) {  
    ellipse(random(width),  
           random(height),  
           25, 25);  
  }  
} // draw()
```

Loops: Critical Components

- **Loop initialization**

Things to do to set up the repetition

- **Loop Termination Condition**

When to terminate the loop

- **Loop Body**

The stuff to be repeated

- **Loop update**

For the next repetition/iteration

Loops: Critical Components

Loop Initialization

```
for (int i = 0; i < 10000; i++) {  
    ellipse(random(width),  
            random(height),  
            25, 25);  
}
```

```
int i = 0;  
while (i < 10000) {  
    ellipse(random(width),  
            random(height),  
            25, 25);  
    i = i + 1;  
}
```

```
int i = 0;  
do {  
    ellipse(random(width),  
            random(height),  
            25, 25);  
    i = i + 1;  
} while (i < 10000);
```

Loops: Critical Components

```
for (int i = 0; i < 10000; i++) {  
    ellipse(random(width),  
           random(height),  
           25, 25);  
    i = i + 1;  
}
```

Termination Condition

```
int i = 0;  
while (i < 10000) {  
    ellipse(random(width),  
           random(height),  
           25, 25);  
    i = i + 1;  
}
```

```
int i = 0;  
do {  
    ellipse(random(width),  
           random(height),  
           25, 25);  
    i = i + 1;  
} while (i < 10000);
```

Loops: Critical Components

```
for (int i = 0; i < 10000; i++) {  
    ellipse(random(width),  
            random(height),  
            25, 25);  
  
    i = i + 1;  
}
```

```
int i = 0;  
while (i < 10000) {  
    ellipse(random(width),  
            random(height),  
            25, 25);  
    i = i + 1;  
}
```

Loop Update

```
int i = 0;  
do {  
    ellipse(random(width),  
            random(height),  
            25, 25);  
    i = i + 1;  
} while (i < 10000);
```

Loops: Critical Components

```
for (int i = 0; i < 10000; i++) {  
    ellipse(random(width),  
            random(height),  
            25, 25);  
}
```

Loop Body

```
int i = 0;  
while (i < 10000) {  
    ellipse(random(width),  
            random(height),  
            25, 25);  
    i = i + 1;  
}
```

```
int i = 0;  
do {  
    ellipse(random(width),  
            random(height),  
            25, 25);  
    i = i + 1;  
} while (i < 10000);
```

Loops: Critical Components

- **Loop initialization**

Things to do to set up the repetition

- **Loop Termination Condition**

When to terminate the loop

- **Loop Body**

The stuff to be repeated

- **Loop update**

For the next repetition/iteration

What happens when
any one of these is
missing
or incorrectly encoded??

Key Computing Ideas

- The computer follows a program's instructions. There are four modes:
 - **Sequencing**
All statements are executed in sequence
 - **Function Application**
Control transfers to the function when invoked
Control returns to the statement following upon return
 - **Repetition**
Enables repetitive execution of statement blocks
 - **Selection**
Enables choice among a block of statements
- All computer algorithms/programs utilize these modes.

Selection

- Enables choice among a block of statements

Should I... { study }
 { sleep }
 { watch a movie }
 { veg out }
 { etc. }

- **If-statements** are one way of doing this

Selection: If Statement

```
if ( <condition> ) {  
    do this  
}
```

```
if ( <condition> ) {  
    do this  
}  
else {  
    do that  
}
```

```
if ( <condition> ) {  
    do this  
}  
else if ( <condition> ) {  
    do that  
}  
else if (...) {  
    ...  
}  
else {  
    whatever it is you wanna do  
}
```

At most ONE block is selected and executed.
