

## Image Processing

- ... computing with and about data,
- ... where "data" includes the values and relative locations of the colors that make up an image.

## An image is an array of colors

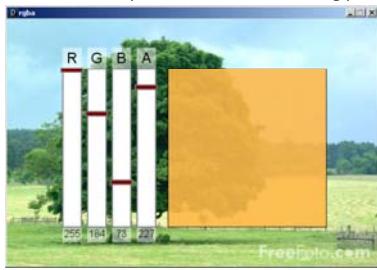

0	1	2	3	...	98	99
100	101	102	103	...	198	199
200	201	202	203	...	298	299
300	301	302	303	...	398	399
400	401	402	403	...	498	499
500	501	502	503	...	598	599
600	601	602	603	...	698	699
700	701	702	703	...	798	799
800	801	802	803	...	898	899

Pixel : Picture Element

mag.pde

## Color

- A triple of bytes [0, 255]
  - RGB or HSB
- Transparency (alpha)
  - How to blend a new pixel color with an existing pixel color

rgba.pde

## Accessing the pixels of a sketch

- **loadPixels()**
  - Loads the color data out of the sketch window into a 1D array of colors named pixels[]
  - The pixels[] array can be modified
- **updatePixels()**
  - Copies the color data from the pixels[] array back to the sketch window

## A 100-pixel wide image

- First pixel at index 0
- Right-most pixel in first row at index 99
- First pixel of second row at index 100

0	1	2	3	...	98	99
100	101	102	103	...	198	199
200	201	202	203	...	298	299
300	301	302	303	...	398	399
400	401	402	403	...	498	499
500	501	502	503	...	598	599
600	601	602	603	...	698	699
700	701	702	703	...	798	799
800	801	802	803	...	898	899

The pixels[] array is one-dimensional

0	1	2	3	...	98	99	100	101	102	103	...
---	---	---	---	-----	----	----	-----	-----	-----	-----	-----

```
// whiteNoise
void setup() {
  size(400, 300);
}

void draw() {
  float b;
  // Load colors into the pixels array
  loadPixels();
  // Fill pixel array with a random
  // grayscale value
  for (int i=0; i<pixels.length; i++) {
    b = random(0, 255);
    pixels[i] = color(b);
  }
  // Update the sketch with pixel data
  updatePixels();
}
```

See also colorNoise.pde

### Accessing Pixels as a 2D Array

- Pixels can be accessed as a 2D array using the following formula:

```
index = r * width + c
index = y * width + x
```

- Using 0-based indices

```
int idx = width*r + c;
pixels[idx] = color(b);
```

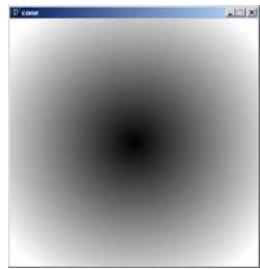

```
// cone
void setup() {
    size(400, 400);
}

// Load colors into the pixels array
loadPixels();

// Access pixels as a 2D array
for (int y=0; y<height; y++) {
    for (int x=0; x<width; x++) {
        // Compute distance to center point
        float d = dist(x, y, width/2, height/2);

        // Set pixel as distance to center
        pixels[y*width+x] = color(d);
    }
}

// Update the sketch with pixel data
updatePixels();
```

### Rendering Images in a Sketch

- Image data can be loaded from a file using `loadImage()` method, and drawn on a sketch with the `image()` command

```
PIImage img = loadImage("myImage.jpg");
image(img, 0, 0);
```

- The `PIImage` object also permits individual pixel color data to be modified.

– like the sketch window

### PIImage

#### Fields

<code>width</code>	- the width of the image
<code>height</code>	- the height of the image
<code>pixels[]</code>	- the image pixel colors (after a call to <code>loadPixels()</code> )

### PIImage

#### Methods

`loadPixels()`

Loads the color data out of the `PIImage` object into a 1D array of colors named `pixels[]`.

`updatePixels()`

Copies the color data from the `pixels[]` array back to the `PIImage` object.

#### Also

<code>red(color)</code>	extract the red component of from color
<code>blue(color)</code>	extract the green component from a color
<code>green(color)</code>	extract the blue component from a color

### Basic Filters

#### • Color

– Extracting Red/Green/Blue colors

- `pixels[i] = color(red(c), 0, 0);`
- `pixels[i] = color(0, 0, blue(c));`

– Grayscale

- `pixels[i] = color(0.3*red(c)+ 0.59*green(c)+ 0.11*blue(c));`

– Negative

- `pixels[i] = color(255-red(c), 255-green(c), 255-blue(c));`

## Sepia

- Technique for archiving BW photos

```

- float r =
  red(c)*0.393+green(c)*0.769+blue(c)*0.189;
- float g =
  red(c)*0.349+green(c)*0.686+blue(c)*0.168;
- float b =
  red(c)*0.272+green(c)*0.534+blue(c)*0.131;
pixels[i] = color(r, g, b);

```

## PImage

### Methods (Cont'd)

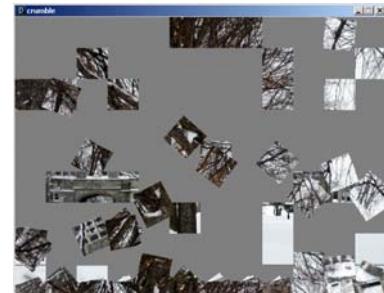

get(...)	Reads the color of any pixel or grabs a rectangle of pixels
set(...)	Writes a color to any pixel or writes an image into another
copy(...)	Copies pixels from one part of an image to another
mask(...)	Masks part of the image from displaying
save(...)	Saves the image to a TIFF, TARGA, PNG, or JPEG file
resize(...)	Changes the size of an image to a new width and height
blend(...)	Copies a pixel or rectangle of pixels using different blending modes
filter(...)	Processes the image using one of several algorithms

## get(...)

- Get a single pixel (very slow)
 

```
Color c = img.get(x, y);
```
- Get a rectangular range of pixels
 

```
PImage img2 = img.get(x, y, w, h);
```

## tint(...) / noTint()

- tint() modifies the fill value for images
 

```

tint( gray );
tint( gray, alpha );
tint( red, green, blue );
tint( red, green, blue, alpha );

```
- Turn off applied tint() values with noTint()
 

```

noTint();

```

```

// warhol2

void setup() {
  // Load the image three times
  PImage warhol = loadImage("andy-warhol2.jpg");
  size(warhol.width*3, warhol.height);

  // Draw modified images
  tint(255, 0, 0);
  image(warhol, 0, 0);

  tint(0, 255, 0);
  image(warhol, 250, 0);

  tint(0, 0, 255);
  image(warhol, 500, 0);
}

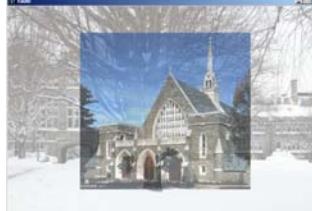

```

```
// fade
PImage[] img = new PImage[5];
int alpha = 255;
int i1 = 0, i2 = 1;

void setup() {
    size(600, 400);
    imageMode(CENTER);
    for (int i=0; i

```

```
// pointillism
PImage img;

void setup() {
    img = loadImage("bmc3.jpg");
    image(img.width, img.height);
    imageMode(CENTER);
    image(img, width/2, height/2);
    noStroke();
    ellipseMode(CENTER);
    loadPixels(); // Cover with random circles
    for (int i=0; i<20000; i++) addPoint();
}

void addPoint() {
    // Add a random filled circle to image
    int x = (int)random(width);
    int y = (int)random(height);
    int i = x + width*y;
    color c = pixels[i];
    fill(c);
    ellipse(x, y, 7, 7);
}

void draw() {
    //addPoint();
}
```

## Simple Image Visualization

- Sample pixel colors every n pixels
- Draw a grid of basic shapes (ellipse, rect, line, triangle, etc) using the sampled color as fill color or stroke color
