10000==1 second

---

# Divide-and-Conquer

---

- Divide – the problem (input) into smaller pieces
- Conquer – solve each piece individually, usually recursively
- Combine – the piecewise solutions into a global solution (if needed)
- Usually involves recursion
- For example .. binary search

---

# Merge Sort

---

- Sort a sequence of numbers  $A$ ,  $|A| = n$
- Base:  $|A| = 1$ , then it's already sorted
- General
  - divide: split  $A$  into two halves, each of size  $\frac{n}{2}$  ( $\left\lfloor \frac{n}{2} \right\rfloor$  and  $\left\lceil \frac{n}{2} \right\rceil$ )
  - conquer: sort each half (by calling mergeSort recursively)
  - combine: merge the two sorted halves into a single sorted list

---

# Example

---

---

# Algorithm

---

```
mergeSort(S) :  
  if S.size() <= 1 return  
  else  
    s1 = S[0, n/2]  
    s2 = S[n/2+1, n-1]  
    mergeSort(s1)  
    mergeSort(s2)  
    S = merge(s1, s2)
```

---

# Merge Algorithm

---

- The key is the merging process
- How does one merge two sorted lists?
- Each element in  $A \cup B$  is considered once
- $O(n)$

```
Algorithm merge(A, B)
  Input sorted A and B
  Output sorted A ∪ B
  S = empty sequence
  while (!A.isEmpty() and
         !B.isEmpty())
    if A.first() < B.first()
      S.addLast(A.removeFirst())
    else
      S.addLast(B.removeFirst())
  while (!A.isEmpty())
    S.addLast(A.removeFirst())
  while (!B.isEmpty())
    S.addLast(B.removeFirst())
  return S
```

# Merge (in Java)

```
private int[] domerge(int[] list1, int[] list2) {
    int[] rtn = new int[list1.length + list2.length];
    int locr=0, loc1=0, loc2=0;
    while (loc1<list1.length && loc2<list2.length) {
        if (list1[loc1] < list2[loc2])
        {
            rtn[locr++]=list2[loc2++];
        }
        else
            rtn[locr++]=list1[loc1++];
    }
    for (int i=loc1; i<list1.length; i++)
        rtn[locr++]=list1[i];
    for (int i=loc2; i<list2.length; i++)
        rtn[locr++]=list2[i];
    return rtn;
}
```

# MergeSort

```
public int[] mergesort(int[] list) {  
    return doMergeSort(list, 0, list.length-1);  
}  
  
private int[] doMergeSort(int[] list, int strt, int eend)  
{  
    if (eend==strt)  
    {  
        int[] tmp = new int[1];  
        tmp[0]=list[strt];  
        return tmp;  
    }  
    if (eend<strt)  
        return new int[0];  
    int mid = (strt+eend)/2;  
    return domerge(mergesort(list, strt, mid), mergesort(list, mid+1, eend));  
}
```

# Timing

# In-place Merge

---

- Making new lists is slow!
- How does one merge two sorted lists  $A[p, \dots, m]$  and  $A[m+1, \dots, r]$ ?
- Use a temp array  $B$  and maintain two indices  $i$  and  $j$ , one for each subarray

# MergeSort using one temp array

```
private int[] array;
private int[] tempMergArr;
private int length;
public int[] mergesort3(int inputArr[]) {
    this.array = inputArr;
    this.length = inputArr.length;
    this.tempMergArr = new int[length];
    doMergeSort3(0, length - 1);
    return array;
}

private void doMergeSort3(int lowerIndex, int higherIndex) {
    if (lowerIndex < higherIndex) {
        int middle = lowerIndex + (higherIndex - lowerIndex) / 2;
        // Below step sorts the left side of the array
        doMergeSort3(lowerIndex, middle);
        // Below step sorts the right side of the array
        doMergeSort3(middle + 1, higherIndex);
        // Now merge both sides
        mergeParts3(lowerIndex, middle, higherIndex);
    }
}
```

# Merge with temp array

```
private void mergeParts3(int lowerIndex, int middle, int higherIndex) {  
    for (int i = lowerIndex; i <= higherIndex; i++) {  
        tempMergArr[i] = array[i];  
    }  
    int i = lowerIndex;  
    int j = middle + 1;  
    int k = lowerIndex;  
    while (i <= middle && j <= higherIndex) {  
        if (tempMergArr[i] <= tempMergArr[j]) {  
            array[k] = tempMergArr[i];  
            i++;  
        } else {  
            array[k] = tempMergArr[j];  
            j++;  
        }  
        k++;  
    }  
    while (i <= middle) {  
        array[k] = tempMergArr[i];  
        k++;  
        i++;  
    }  
}
```
